

Project title -

Pizza Studio

➤ **Aim/objective -**

To create a customer friendly user-interface with simple steps to order their customizable pizza with a graphical representation.

➤ **Technologies used -**

Front-End: HTML, CSS, JavaScript

Database: SQL

Back-End/middleware: PHP

➤ **Assumption taken -**

We took that the customer chose all the toppings at first but the user is given a choice to customize their pizza so that it makes the customer more fantasize about the toppings of pizza and to know the toppings available in our pizza studio.

➤ **Details handled -**

We protect the data of the user's customized pizza toppings, phone number, first name, last name, address, local/non-local, any extra note for the chef/deliverer and his experience during the process of ordering the pizza.

➤ **Sample scenarios -**

A customer can order a customizable pizza by selecting his favourite toppings.

➤ **Who can use this application in real life -**

A person who craves for a delicious pizza and wants to choose their favourite toppings rather than some routine pizza can check out our website and order as per his choices.
